

AERO Studio - 2023.1.34.0

Enhancements

- Video projection reading is now performed asynchronously and has no impact on preview framerate while in edit mode. The frame will simply be loaded as soon as it is available

Changes

- Exclude from lighting has been returned to the Formation Element options. It is now properly implemented.

Bug Fixes

- Fixed double free that could happen with editable geometry scene views
- Fixed issue where strobe was acting like a constant light event
- Fixed issue where re-ordering channels did not affect the light layer evaluation order
- Fixed issue where when selecting between events with the same ID and start/end times, the inspector would resolve to the wrong event
- Fixed issue where when selecting between events with the same ID and start/end times, previously selected events may remain selected
